Number: 1986-10-30 JP1986000257040

Abstract:

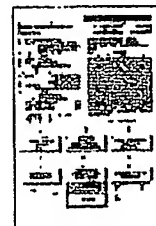

PURPOSE: To store and display schedule data by allowing schedule data in plural kinds of period units, e.g. day, week, day-of-the-week, and month units to be set, and specifying a position on a calendar display by a position specifying means such as a tablet input part and reading corresponding schedule area.

CONSTITUTION: When a specific position of the tablet input part 12 is pressed, X-coordinate data and Y-coordinate data on the depression position are sent as an analog voltage signal to an A/D conversion part 37. The A/D conversion part 37 converts the input voltage signal into a digital value as X-coordinate and Y-coordinate data, which are sent to a CPU31. A display generation part 35 generates data on a calendar display according to the data sent from the CPU31 and also selects one of four formats, i.e. a weekly schedule, a daily schedule, a day-of-the-week schedule, and a monthly schedule when schedule data is displayed, thereby generating the display data for the display.
